Changes to NavBox software

From March 2024 the NavBox software will stop supporting of following services:

- 32-bits NavBox dedicated hardware architecture
- e-mail-based communication.

Latest NavBox software version, supporting above functionality, is 4.14. Expected period of software release is December 2023.

Started on NavBox software version 4.15 HTTPS be supported as communication link between NavBox and NavCloud.

What are benefits of HTTPS over e-mail-based communication?

Here they are:

- More efficient and low latency data updates
- Reduced total data volume over satellite communication (less expenses for communication)
- Better technical support
- More reliable and robust communication
- More available services
- Less administration by vessel/customer IT administration
- No account/password management
- Improved Cyber Security

Best regards,

Anton Karelskiy
