

World's First Digital Chart Table NAVTOR NavStation

NEW
Now including
PASSAGE PLANNING

NAVTOR NavStation software integrates all digital navigational data for optimal on screen presentation to plan and organize a safe, secure and economical voyage

NAVTOR NavStation is a giant leap in the evolution of e-navigation and is exactly what navigators have been dreaming of

NavStation combines unique software with an optional 46inch 'gigapad' touch device, giving navigators an intuitive and user-friendly interface to plan optimal vessel routes. The software gathers and overlays the data navigators require – including ENC's, weather data, tidal information, digital publications, and other services like piracy updates – on a single screen. Users can then grab, swipe and manoeuvre the layers on the giant touch pad to unlock a new e-navigation reality.

NAVTOR NavStation on your PC

The NavStation software, which also operates on standard computers has been in development for the past year, with a series of successful trial installations undertaken with ship-owners based in Norway. NavStation utilises NAVTOR's market leading ENC service as its 'base layer'. Subscribers can then add and integrate additional NAVTOR e-navigation products and services, including weather overlay, all Admiralty's digital products and publications, as well as services like piracy or iceberg updates. It's a unique route-planning tool and an easy way to really seize the great potential e-navigation offers.

9. The Passage Planning module has an intuitive user interface
8. Admiralty Total Tide, Digital List of Lights and Radio Signals are easy at hand
7. Split screen showing the initial and the latest optimized route
6. Wave height along route with alarm set for wave height
5. Wind speed along route with alarm set for wind speed
4. Colour presentation of wave height
3. Beaufort colour presentation of wind appearance
2. Route planning on the ENC "base layer"
1. NavStation Desktop easy organizes the subscription apps
